

Process differences behind heterogeneous buffering responses

Fig. 3 scaffold: contrasting process changes by response group

Fig. 3 will compare hydro-vegetation-energy changes among Delta CBI response groups.

Tensor_Data files detected: 27 site tables

Available candidate variables: SMC, T1_5, T2_0, T3_15, unknown_data1/2/3

TODO:

1. Align event/reference windows to 15-min Tensor_Data records.
2. Compute $\Delta X = X_{\text{event}} - X_{\text{reference}}$ for candidate variables.
3. Build response-group heatmap and key-variable comparison panels.
4. Export selected process variables for Fig. 4 pathway analysis.
